

CARDIOLOGY CONSULTANTS OF PHILADELPHIA

Cardiologists Consultants of Philadelphia (CCP) opens 3rd Vein Clinic

PHILADELPHIA – October 10, 2016– [CCP](#). America's largest independent cardiac care practice has expanded its vein clinic practice and opened a new facility in South Philadelphia at 1703. S Broad Street.

To start, Dr. Daniel McCormick and Dr. Brett Victor will be seeing patients in the vein clinic and performing radiofrequency ablations. Radiofrequency ablation is a non-invasive treatment for venous insufficiency and varicose veins. In the procedure, a thin catheter is inserted into the afflicted vein through the skin. The catheter emits radio waves which heat the specific areas of the vein and cause it to close down, therein treating the venous insufficiency and/or varicose veins.

Dr. Daniel McCormick, DO, FACC, FSCAI, says of the new opening, *"The new innovative vein laboratory at 1703 South Broad Street will allow access to comprehensive, diagnostic and therapeutic vein procedures for patients suffering one of the most common and disabling clinical disorders. This will represent a tremendous resource to patients with varicose veins, chronic leg swelling, and other disfiguring venous conditions."*

The new vein clinic will be the 3rd vein clinic for CCP. CCP also has vein clinics in Springfield, PA at 196 West Sproul Road (with Dr. Kimberly Campbell) and in Center City Philadelphia, PA at 800 Walnut Street (with Dr. Daniel McCormick and Dr. Brett Victor).

To schedule a consultation with one of our vein specialists, call 215-CCP-DOCS today!

About CCP

CCP is America's largest independent cardiac care practice with offices in all five Southeastern Pennsylvania counties. With 91 cardiologists on staff in 33 office locations, CCP is committed to improving the health of patients through the provision of the most comprehensive cardiovascular care, research, and education possible.
